

## Digital & Soft Skills for the 21st Century

Digital and soft skills are now an integral part of every profession. This year, in collaboration with PwC Greece, through the action "Digital & Soft Skills for the 21st Century", for the 4th year, students discover the digital and horizontal skills necessary in any professional field they choose to pursue.

PwC Greece executives, undertaking the role of mentors, converse with groups of students from Feres Evros, Rhodes, Ioannina, and many other regions, about all the exciting changes that technology brings to the workplace, about the importance of skills, and they answer:

- What new professions and opportunities are arising from the integration of technology at work?
- What digital and soft skills are useful in today's labour market?
- How do these skills apply to the professions of the Auditor and the Consultant?
- How can I discover my talents and choose my future profession?

The goals of the action are to inform students in an experiential way about the integration of technology in the workplace, and the usefulness of digital and soft skills in their future academic and professional careers. They will therefore be able to discover their talents and potential, and orient themselves toward their interests.

The action is implemented with the support of PwC Greece for the school year 2022-2023
