

## **“Modern Workplace Environment, Better Health, Natural Environment and Climate Change”**

During the school year 2021-2022 and via the project “Modern Workplace Environment, Better Health, Natural Environment and Climate Change”, implemented with the support of Interamerican, students from all over Greece participate in conversations with executives and partners of Interamerican, who undertake the role of mentors.

The project aims at:

- Informing students about:
  - the new workplace environment and how it can bring out our talents and virtues and lead to professional health
  - how we can improve and protect our health with simple and beneficial habits
  - How we can contribute to the prevention of natural disasters and how climate change affects us
  - Making students understand the importance of the above-mentioned issues, taking into consideration the rapid changes that surround us,
- And helping students discover their value for a safer everyday life.

The project is implemented with the support of Interamerican.
