

Curious Minds, Creative Professionals II

The action, "Curious Minds, Creative Professionals II" is being held for the second consecutive school year in schools throughout Greece. The aim of the action is for the students to get informed about the scientific fields and to develop important soft skills.

Merck Greece employees adopt the role of mentors and share their knowledge and experience through live sessions, by answering students' questions. This way, the participating students learn about scientific fields such as Biology, Pharmacy, Chemistry, Medicine, Mathematics, Physics, etc., and through asynchronous mentoring, they acquire horizontal skills such as Curiosity, Creativity, Critical Thinking and Problem Solving, essential tools for their future academic and professional careers.

The action is implemented with the support of Merck Greece.
